HTTrack

HTTrack is a <u>free</u> and <u>open source</u> <u>Web crawler</u> and <u>offline</u> <u>browser</u>, developed by <u>Xavier Roche</u> and licensed under the GNU General Public License <u>Version</u> 3.

HTTrack allows users to download World Wide Web sites from the Internet to a local computer. [5][6] By default, HTTrack arranges the downloaded site by the original site's relative link-structure. The downloaded (or "mirrored") website can be browsed by opening a page of the site in a browser

HTTrack can also update an existing mirrored site and resume interrupted downloads. HTTrack is configurable by options and by filters (include/exclude), and has an integrated help system. There is a basic command line version and two <u>GUI</u> versions (WinHTTrack and WebHTTrack); the former can be part of scripts and cron jobs.

HTTrack uses a <u>Web crawler</u> to download a website. Some parts of the website may not be downloaded by default due to the <u>robots exclusion protocol</u> unless disabled during the program. HTTrack can follow links that are generated with basic <u>JavaScript</u> and inside <u>Applets</u> or <u>Flash</u>, but not complex links (generated using <u>functions</u> or <u>expressions</u>) or server-side <u>image</u> maps.
